

Questionnaire – FACS Sorting (BD FACSAria IIu)

Experimentalist: _____

Principal Investigator: _____

Institute: _____

Phone: _____

e-mail: _____

Sorting Material:

Species of origin:

human

human cell line _____

primary tissue _____

mouse other _____

Organ of origin:

PB spleen

LN other _____

Condition:

non-fixed fixed

sterile non-sterile

virally transduced or infected

specify _____

Fluorescent Dyes:

FITC PE CY3

PerCP CY5 APC

PacificBlue 7AAD PI

GFP ALEXA _____

other _____

Sort Parameters

normal single cell deposit

_____ -tubes _____ -tubes

_____ -well plate _____ -well plate

Temperature Control

room temperature 4°C

Important information for cell sorting at the FACSaria IIu

- To schedule your sort appointments call **5549** (Mr. Eder or Ms. Fink) at least **ONE WEEK** prior to intended sort date
- Appointments can be booked Monday to Friday between 8 am and 4 pm (other times upon request)
- Please provide a flow cytometric analysis of the intended sort material (or one as similar as possible) and discuss it either with one of the operators or with PD Dr. Petra Hoffmann (phone: 5592) prior to the first sort date
- If you are late for your appointment please give us a call (lab: 5549 or at the sorter: 6644). Delay may result in reduced time for sorting
- Please provide a telephone number for contact on the sort day
- Ideal cell concentration for most sorting material: **20x10⁶ cells/ml**
- Minimum sample volume: 0,5 ml
- Sorting material must be prepared and kept under sterile conditions (exceptions only upon prior request)
- Cells must be resuspended in sterile PBS (addition of serum/protein possible; please consult operators) and filtered immediately before sorting ($\leq 40\mu\text{m}$)
- **PLEASE NOTE:** Safety level **S1** material (genetic engineering and biohazard) can be sorted without prior notice. Upon special request and **ONLY AFTER PRIOR CONSULTATION** we might be able to sort material with biohazard level S2.

I herewith certify that the cells provided by me or my member of staff contain no infectious or otherwise hazardous materials for man.
